

ARNAV DIXIT

SharePoint & SPFx Developer

Gurugram, Haryana | +91 9340891701 | dixitarnav20@gmail.com

PROFESSIONAL SUMMARY

SharePoint & SPFx Developer with nearly 3 years of experience building SharePoint Online intranets, SPFx web parts and extensions, Power Automate workflows, Canvas Apps, and enterprise document management solutions. Hands-on with React, TypeScript, PnP JS, PnP PowerShell, Microsoft Graph, REST APIs, KQL search, managed properties, Power BI integration, and SharePoint provisioning. Comfortable working across requirement clarification, development, production issue fixing, performance tuning, deployment support, and user-facing documentation.

SKILLS

SharePoint Online: Modern sites, lists, libraries, content types, site columns, metadata, permissions, governance, and document libraries.

SPFx & Frontend: SPFx web parts, extensions, application customizers, React, TypeScript, JavaScript, SCSS/CSS, HTML, Tailwind, Bootstrap, jQuery, and Fluent UI.

Microsoft 365 & Integrations: Microsoft Graph, REST APIs, PnP JS, PnP PowerShell, Power Automate, Canvas Apps, Power BI, custom connectors, and basic Dataverse scenarios.

Search & Provisioning: KQL queries, managed/crawled properties, search result mapping, PnP templates, site scripts/designs, term store work, tenant themes, and CSOM.

Tools & Database: Visual Studio Code, Visual Studio, CMD/CLI, ShareGate, MS SQL, and SharePoint migration/support activities.

PROFESSIONAL EXPERIENCE

Essence Software Solutions Pvt. Ltd. | SharePoint & SPFx Developer | Gurugram Sep 2025 - Present

- Develop SharePoint Online intranet and document management modules using SPFx, React, TypeScript, PnP JS, PnP PowerShell, Microsoft Graph, REST APIs, CSOM, and SCSS.
- Built Tawasol intranet features including News Story pages, News Page Title, More For You, Global Banner, Announcement Banner, Our Values, Viva Engage header, Events Image Gallery, Forms Library, Policies & Procedures, and Power BI dashboard/category pages.
- Implemented Header, Footer, Floating Navigation, Content Hider, and Notification Center as SPFx application customizers, with shared services for search suggestions, navigation, profile menu, and notifications.
- Worked on Corp DMS enhancements covering Quick Search, Advanced Search, document details, comments, distribution, history, link modal, reports, finance search, and reusable field mapping helpers.
- Improved Corp DMS search behavior by refining KQL queries, managed property mappings, title/category fallbacks, pagination, filtering, caching/helper logic, and SQL-backed payload handling.
- Fixed production issues around People Picker multi-user copy/paste, Ref No searches, comment visibility, duplicate Distribution calls, copied file links, total count mismatch, and SharePoint CSS overlap inside SPFx web parts.
- Automated provisioning and governance with PnP PowerShell and CSOM, including .pnp templates, term store migration, site columns, content types, Site Pages templates, tenant themes, and site-selected app permissions.
- Integrated Microsoft Graph, Power BI, Tahweel, and Amplitude analytics for people search, dashboards, celebration feeds, onboarding journeys, and CTA tracking.

Teceon | SharePoint Developer May 2023 - Sep 2025

- Developed SharePoint solutions covering web parts, workflows, custom forms, list/library configuration, and integration modules using SPFx, JavaScript, REST APIs, and SharePoint Online.
- Built custom web parts and extensions to extend SharePoint features based on client requirements, business rules, and user feedback.
- Worked with clients and internal teams to clarify requirements, document technical specifications, test functionality, and support user adoption.
- Created Power Automate flows for approval processes, scheduled jobs, notifications, reminders, and other business process automation scenarios.
- Developed Canvas Apps for business forms and request workflows, using SharePoint lists and basic Dataverse scenarios for data handling.
- Configured role-based access, permissions, sites, sub-sites, lists, libraries, and metadata structures to support secure and organized SharePoint environments.
- Handled post-deployment support, troubleshooting, documentation, knowledge transfer, and incremental enhancements after release.

EDUCATION

Bachelor of Science in Computer Science - Institute of Technology and Management, Gwalior May 2020 - June 2024

Higher Secondary School - Ashish Convent Hr. Sec. School, Gwalior July 2019 - Apr 2020

PROJECTS

Tawasol - Revamp Intranet Portal Sep 2025 - Present

Role: SharePoint & SPFx Developer

Duration: Ongoing

Technologies and Tools: SharePoint Online, SPFx, React, TypeScript, PnP JS, PnP PowerShell, Microsoft Graph API, REST APIs, Power BI, CSS/SCSS, Amplitude Analytics, CSOM

Project Description: Tawasol is a SharePoint Online intranet revamp designed to bring news, events, forms, policies, dashboards, and collaboration features into one branded digital workplace. The solution uses custom SPFx web parts, application customizers, shared services, PnP-based provisioning, and analytics integrations to provide a consistent employee experience.

Key Work:

- Developed SPFx content modules such as News Story detail pages, News Page Title, More For You, Global Banner, Announcement Banner, Our Values, Viva Engage header, and Events Image Gallery.
- Built Forms Library, Policies & Procedures landing/detail pages, and dashboard/category web parts with embedded Power BI reports.
- Implemented site-wide Header, Footer, Floating Navigation, Content Hider, and Notification Center as SPFx application customizers.
- Created reusable services and components including SearchService, NavigationService, NotificationService, SuggestBox, Floating Navigation, and notification overlays.
- Supported provisioning and governance through PnP PowerShell, PnP JS, and CSOM for templates, term store migration, site columns, content types, page templates, themes, and app permissions.
- Integrated Microsoft Graph, Power BI, Tahweel, and Amplitude analytics for people search, dashboards, celebration feeds, onboarding, and CTA tracking.

Corp DMS - Enterprise Document Management System 2026 - Present

Role: SharePoint & SPFx Developer

Duration: Recent Enhancements

Technologies and Tools: SharePoint Online, SPFx 1.17, React, TypeScript, PnP JS, SPFx Controls React, REST APIs, Azure Functions APIs, KQL, Managed Properties, MS SQL, SCSS/Legacy CSS, Fluent UI

Project Description: Corp DMS is a SharePoint Online document management application used for incoming, outgoing, and internal documents across business areas such as Projects, Shops, Marketing, Management, Mall Operations, Company Library, Policy Templates, and Finance. The work focused on stabilizing search, document actions, field mappings, and UI behavior while modernizing legacy SharePoint patterns inside SPFx.

Key Work:

- Improved Quick Search and Advanced Search loading, pagination, filtering, result mapping, and count accuracy for large document sets.
- Refined KQL query building and fallback mapping for title, category, Ref No, project/project-name reverse lookup, department type, and finance fields.
- Centralized title and category handling for different internal field names, including Project, Shops, Management, Marketing, Mall Operations, Company Library, Policy Templates, and Finance mappings.
- Mapped SQL-backed search responses into the SPFx result flow and added helper/caching logic to reduce duplicate calls and improve perceived loading speed.
- Fixed People Picker multi-user copy/paste, comment visibility after search, Ref No comment scenarios, Distribution duplicate API calls, History/Link modal behavior, and copied document link usability.
- Resolved table overlap, SharePoint CSS conflicts, legacy CSS breakage, and web part layout issues so the application stayed inside the SharePoint page structure.
- Added and corrected managed/crawled property mappings so search fields became visible and existing data could be surfaced reliably.

GlobalOne News Hub Sep 2024 - Sep 2025

Role: SharePoint Developer

Duration: 12 Months

Technologies and Tools: SharePoint Online (Modern), SPFx, React, TypeScript, Microsoft Graph APIs, Canvas Apps, Power Automate, Site Scripts, Site Designs, JavaScript, Custom Connector

Project Description: GlobalOne News Hub is a multi-country and multilingual intranet news portal on SharePoint Online. It centralizes corporate news, announcements, and knowledge sharing through a hub site with associated country news sites. The solution supports targeted news, multilingual pages, resource-based SPFx localization, approvals, distribution, and tenant-only access through Microsoft Entra ID.

Key Work:

- Designed responsive SPFx web parts and extensions such as Country Switcher, Language Toggle, and Personalized News Feed.
- Built a Canvas App editorial console for publishers to submit, tag, schedule, and manage news articles using Microsoft Lists and Term Store.

- Created Power Automate workflows for approvals, translation requests, notifications, and content lifecycle management.
- Implemented multilingual pages and SPFx resource-based localization for country/locale-based UI switching.
- Integrated Microsoft Graph for personalization and audience targeting by department, role, and country.
- Developed a custom connector for an internal HR/geo directory to support country targeting and language defaults.
- Prepared runbooks, supported UAT, and handled user training for adoption and handover.

MetaPort - Internal Travel Desk June 2023 - Aug 2024

Role: SharePoint Developer

Duration: 12 Months

Technologies and Tools: SharePoint Online, Canvas Apps, Power Automate, Microsoft Graph APIs, ShareGate

Project Description: MetaPort is an internal travel management solution built on SharePoint Online for travel requests, approvals, itinerary tracking, coordinator actions, and post-trip settlement activities. Canvas Apps were used for request capture and role-specific views, while SharePoint lists and Power Automate handled structured data, routing, reminders, escalations, and notifications.

Key Work:

- Designed Canvas Apps and customized SharePoint list forms for request entry, approval views, and coordinator workbenches.
- Built Power Automate flows for multi-level approvals, reminders, escalations, and post-trip settlement tasks.
- Modeled SharePoint lists, content types, and metadata for trips, itineraries, vendors, and compliance documents.
- Integrated Microsoft Graph profile, cost center, and manager details to pre-fill fields and support audience targeting.
- Configured branded SharePoint sites and role-based permissions for requesters, approvers, and coordinators.
- Supported UAT, documentation, user training, incremental enhancements, and ShareGate migration activities.
