ARNAV DIXIT

SharePoint & SPFx Developer

Gurugram, Haryana | +91 9340891701 | dixitarnav20@gmail.com

PROFESSIONAL SUMMARY

SharePoint and SPFx developer with 3+ years on SharePoint Online intranets for enterprise clients. Day to day that means SPFx web parts and application customizers in React and TypeScript, PnP JS and PnP PowerShell, Microsoft Graph, KQL search and Power Automate. Over the last year the work has moved from single web parts to full applications running inside SharePoint: an idea management system with a staged review workflow, a CMS that lets non-technical admins run portal pages, and a configurable awards nomination platform.

SKILLS

SharePoint Online: Modern sites, lists and libraries, content types, site columns, metadata, permissions and SharePoint groups, document management, governance.

SPFx & Frontend: Web parts, application customizers, React, TypeScript, JavaScript, SCSS/CSS modules, Fluent UI, HTML, Tailwind, Bootstrap, jQuery. Responsive and mobile layouts, light/dark theming.

Microsoft 365 & Integrations: Microsoft Graph, SharePoint REST, PnP JS, PnP PowerShell, Power Automate, Canvas Apps, Power BI embedding, Viva Engage (Yammer) API, Azure AI Face API, custom connectors, basic Dataverse.

Search & Provisioning: KQL, managed and crawled properties, result mapping, PnP templates, site scripts and designs, term store, tenant themes, CSOM.

Tools: VS Code, Visual Studio, Gulp/SPFx toolchain, ShareGate, MS SQL, Google Analytics, Amplitude.

PROFESSIONAL EXPERIENCE

Essence Software Solutions Pvt. Ltd. | SharePoint & SPFx Developer | Gurugram **Sep 2025 - Present**

- Building Innov8 Idea Management (Phase 1), an SPFx application where employees submit ideas and move them through Initial Screening, Evaluation, Sprint and Implementation, with review queues, sprint and pipeline boards, challenges, rewards and an executive dashboard.
- Built the Innov8 CMS dashboard that replaced the old Portal Content Hub. Admins edit the portal pages through forms with a live preview, then save drafts, publish or schedule changes, with editor/publisher roles and an audit log.
- Built the admin side of the Athar Awards recognition programme: form builder, scoring and governance rules, reviewer assignments, HC review, voting feedback, mail templates and analytics.
- Delivered Tawasol intranet features including News Story pages, Global and Announcement Banners, Forms Library, Policies & Procedures, Power BI dashboard pages, the employee profile page, Viva Engage conversations and an event gallery with face matching.
- Work on the shared application customizer used across both portals: header, footer, floating navigation, breadcrumbs, notification centre, reminders, onboarding and person hover cards.
- Worked on Corp DMS search and document actions (KQL, managed properties, SQL-backed results) and automated provisioning with PnP PowerShell and CSOM.

Teceon | SharePoint Developer **May 2023 - Sep 2025**

- Developed SharePoint solutions covering web parts, workflows, custom forms, list/library configuration and integration modules using SPFx, JavaScript, REST APIs and SharePoint Online.
- Built custom web parts and extensions to extend SharePoint based on client requirements, business rules and user feedback.
- Created Power Automate flows for approvals, scheduled jobs and reminders, and Canvas Apps for request forms on SharePoint lists.
- Set up sites, lists, libraries and permissions, and handled requirements, post-deployment support and knowledge transfer.

EDUCATION

Bachelor of Science in Computer Science - Institute of Technology and Management, Gwalior — May 2020 - June 2024
Higher Secondary School - Ashish Convent Hr. Sec. School, Gwalior — July 2019 - Apr 2020

PROJECTS

Innov8 - Innovation Portal & Idea Management — 2026 - Present

Role: SharePoint & SPFx Developer

Technologies and Tools: SharePoint Online, SPFx, React, TypeScript, SharePoint REST, PnP JS, Microsoft Graph, Power Automate, KQL Search, SCSS modules

Project Description: Innov8 is a client's innovation portal on SharePoint Online. It has two parts: a set of public-facing portal pages (Home, Who We Are, Strategy, Achievements, Technology and AI Agents, Built Assets, Lab and Culture) and an Idea Management system that replaces the earlier Nectir platform. Everything runs as one SPFx web part plus a shared application customizer, with SharePoint lists as the data store.

Key Work:

- Built the idea lifecycle (Draft, Initial Screening, Evaluation, Sprint, Implementation, Implemented, plus Hold, Future Implementation and Archive) with a workspace per stage for screening, evaluation scoring, decisions and delivery tracking.
- Built Idea Exchange, My Ideas, idea submission with drafts and attachments, challenges, rewards and an in-app notifications feed.
- Built an executive dashboard and insights view showing funnel, stage and department breakdowns, with CSV export for reporting.
- Kept the SPFx client off privileged writes: the web part logs workflow events to a list and Power Automate picks them up for routing, emails and status changes.
- Added role-based access (owners, contributors, evaluators, executives, operations) using SharePoint groups, plus an operations area for the Nectir migration reconciliation and audit trail.
- Built the CMS dashboard: page and section editors, collection editors, media and link fields, a layers tree, drag-to-reorder, live preview inside the real page frame, scheduled publishing and an audit log.
- Added a per-user light/dark/system theme saved in SharePoint, using ETag-checked updates with retries so two tabs saving at once don't overwrite each other.
- Built portal pages from the client's approved prototypes, including enterprise search across portal content and a service requests module.

Tawasol - Revamp Intranet Portal — Sep 2025 - Present

Role: SharePoint & SPFx Developer

Technologies and Tools: SharePoint Online, SPFx, React, TypeScript, PnP JS, PnP PowerShell, Microsoft Graph, Viva Engage (Yammer) REST API, Azure AI Face API, Power BI, SCSS, Google Analytics, Amplitude, CSOM

Project Description: Tawasol is a SharePoint Online intranet revamp that brings news, events, forms, policies, dashboards, employee profiles and recognition programmes into one branded workplace. It is built from custom SPFx web parts, a shared application customizer, PnP-based provisioning and analytics.

Key Work:

- Developed content web parts including Forms Library, Policies & Procedures, Power BI dashboards, News Story pages, News Page Title, More For You, Global Banner, Announcement Banner, Our Values, Vision & Mission, Offers & Benefits, Events Image Gallery and Let's Meet.
- Built Tawasol Conversations on the Viva Engage REST API, so staff can read and post to community threads, including file uploads, without leaving the intranet.
- Added face matching to the event gallery with Azure AI Face API, so employees can find event photos they appear in.
- Built the employee profile page (header card, leave balance, holidays, HR letters, events and training, joined communities) and the Tasks, Help/FAQs and Feature Wheel web parts.
- Built the Athar Awards admin dashboard: a form builder with section and question settings and a live preview, scoring and governance rules, assignments, HC review, voter feedback, mail templates and notification mapping, and analytics.
- Maintained the site-wide application customizer: header, footer, floating navigation, breadcrumbs, notification centre, reminder popups, onboarding tour, person hover cards and search suggestions.

- Supported provisioning with PnP PowerShell, PnP JS and CSOM, and wired up Google Analytics and Amplitude for page and CTA tracking.

Corp DMS - Enterprise Document Management System **2026 - Present**

Role: SharePoint & SPFx Developer

Technologies and Tools: SharePoint Online, SPFx 1.17, React, TypeScript, PnP JS, SPFx Controls React, REST APIs, Azure Functions APIs, KQL, Managed Properties, MS SQL, SCSS/Legacy CSS, Fluent UI

Project Description: Corp DMS is a SharePoint Online document management application for incoming, outgoing and internal documents across Projects, Shops, Marketing, Management, Mall Operations, Company Library, Policy Templates and Finance. My work focused on making search, document actions, field mappings and the UI reliable while moving legacy SharePoint patterns into SPFx.

Key Work:

- Improved Quick Search and Advanced Search loading, pagination, filtering, result mapping and count accuracy on large document sets.
- Reworked KQL query building and fallback mapping for title, category, Ref No, project lookups, department type and finance fields.
- Mapped SQL-backed search responses into the SPFx results and added caching to cut duplicate calls.
- Fixed People Picker multi-user copy/paste, comment visibility after search, duplicate Distribution API calls, History/Link modal behaviour and copied document links.
- Resolved SharePoint CSS conflicts and legacy CSS breakage so the app stayed inside the page layout.
- Added and corrected managed/crawled property mappings so existing data showed up in search.

GlobalOne News Hub **Sep 2024 - Sep 2025**

Role: SharePoint Developer | **Duration:** 12 Months

Technologies and Tools: SharePoint Online (Modern), SPFx, React, TypeScript, Microsoft Graph APIs, Canvas Apps, Power Automate, Site Scripts, Site Designs, JavaScript, Custom Connector

Project Description: A multi-country, multilingual news portal on SharePoint Online. A hub site with associated country news sites handles corporate news, announcements and knowledge sharing, with targeted news, multilingual pages, approvals and tenant-only access through Microsoft Entra ID.

Key Work:

- Designed responsive SPFx web parts and extensions such as Country Switcher, Language Toggle and Personalized News Feed.
- Built a Canvas App editorial console for publishers to submit, tag, schedule and manage articles using Microsoft Lists and Term Store.
- Created Power Automate workflows for approvals and translation requests, and implemented multilingual pages with SPFx localization.
- Used Microsoft Graph for audience targeting and built a custom connector to an internal HR/geo directory; supported UAT and training.

MetaPort - Internal Travel Desk **June 2023 - Aug 2024**

Role: SharePoint Developer | **Duration:** 12 Months

Technologies and Tools: SharePoint Online, Canvas Apps, Power Automate, Microsoft Graph APIs, ShareGate

Project Description: An internal travel management solution on SharePoint Online for travel requests, approvals, itinerary tracking, coordinator actions and post-trip settlement. Canvas Apps handle request capture and role-specific views; SharePoint lists and Power Automate handle data, routing, reminders and escalations.

Key Work:

- Designed Canvas Apps and customized list forms for request entry, approvals and the coordinator workbench.
- Built Power Automate flows for multi-level approvals, reminders, escalations and settlement tasks.
- Modeled lists and content types for trips, itineraries and vendors, and pre-filled forms with Microsoft Graph profile data.
- Configured branded sites and role-based permissions, and supported UAT, training and ShareGate migration.
